

## Setting up SOA Project (Humanitarian Events Web Service)

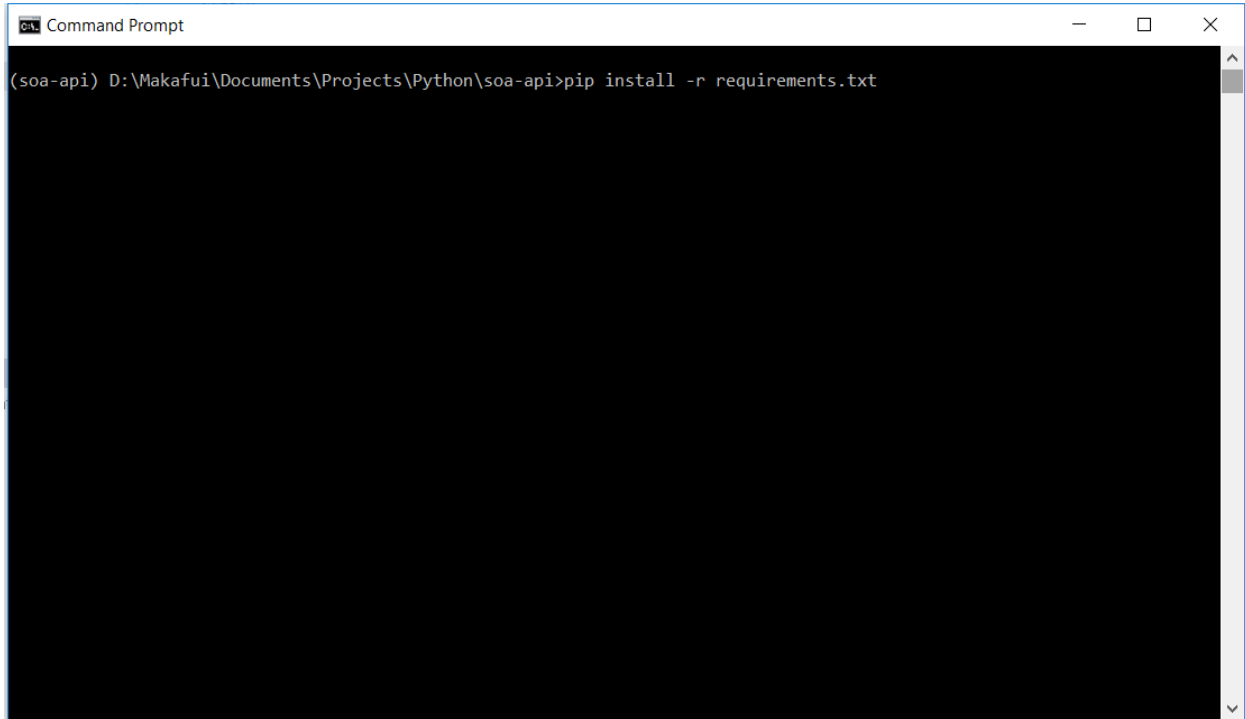

### Instructions

Download and Install Python 3.6 from <https://www.python.org/downloads/>

Use the command prompt to navigate to the directory of the project and run the command

```
pip install -r requirements.txt
```

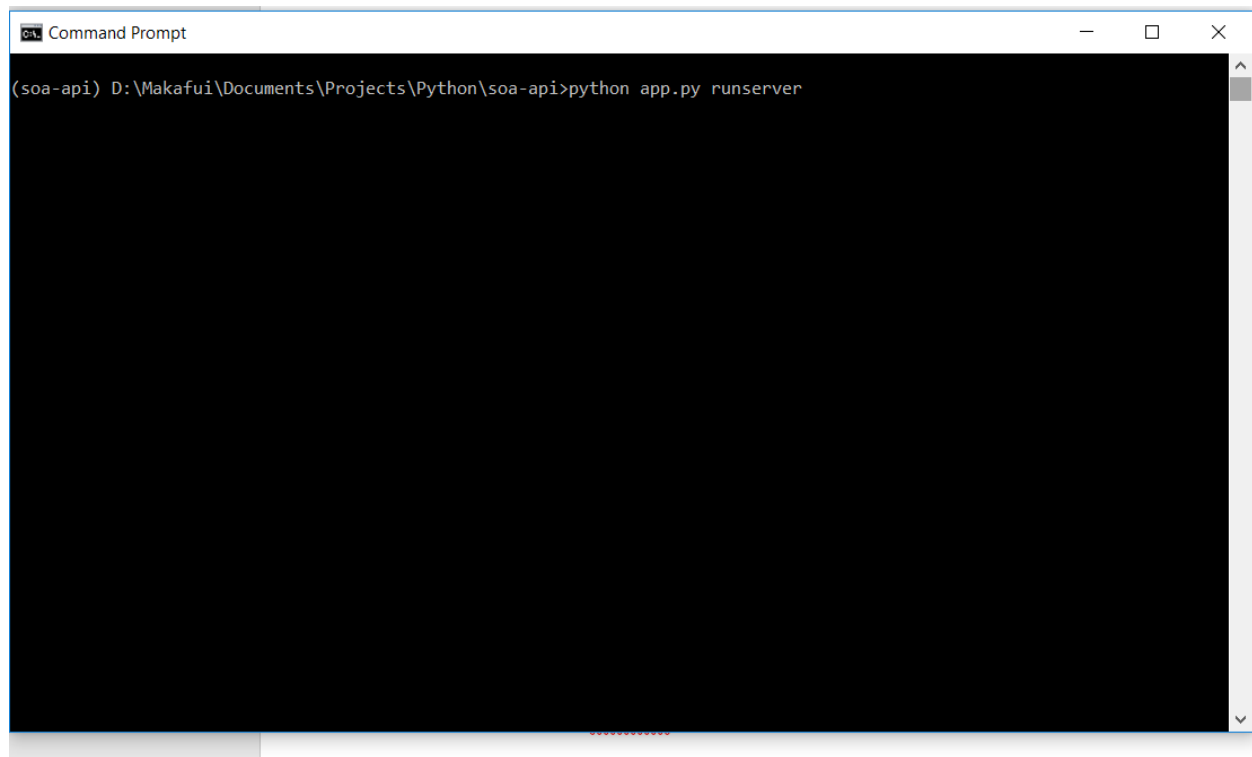

This installs the dependencies of the project.

```
Command Prompt
(soa-api) D:\Makafui\Documents\Projects\Python\soa-api>pip install -r requirements.txt
```

To start the web server, run the command in the project directory

```
python app.py runserver
```

```
(soa-api) D:\Makafui\Documents\Projects\Python\soa-api>python app.py runserver
```

The web service will be accessible on <http://localhost:8888/>
